Recycled Polyurethane ♻

Recycled polyurethane (R-PU) is a form of polyurethane obtained from pre-existing polyurethane materials, reprocessed to create a new material. This recycling process offers several advantages in terms of environmental sustainability:

• Waste Reduction
• Resource Savings
• Environmental Footprint Reduction
• Versatility of Use
• Promotion of Circular Economy

Recycled polyurethane represents a significant opportunity to reduce the environmental impact of plastic waste and polymeric materials, simultaneously promoting responsible resource use and sustainability in manufacturing and consumer goods production industries.

OCEAN

OCEAN
collection

The Ocean bags collection consists of a computer backpack, duffel bag and beauty case, all OceanCycle™.

This collection helps prevent plastic from reaching the oceans*.

oceancycle

OceanCycle™ is a social enterprise focused on preventing ocean plastic pollution and improving livelihoods in coastal communities through certification and direct social interventions.

Through certification, OceanCycle™ partners have achieved:

926,000,000
Bottles diverted from the ocean

31,300,000
Kg of CO_2 prevented

4,600,000
Income for coastal communities

The Ocean bags collection is OceanCycle™ certified.

LET'S STOP THE OCEAN PLASTIC

- for good

oceancycle

oceancycle.co

Prevention is key

Over 80% of plastic in our oceans starts on land, and research shows that what does get in the water sinks to the bottom and is difficult to recover.

Most ocean plastic cannot be recycled

Plastic in the water gets degraded by salt and light and attracts toxins and microorganisms. It also breaks into small pieces and mixes with other plastics making cleaning and sorting difficult and costly.

The problem is bad and getting worse

Over 11 million tons of new plastic enters the ocean each year, a figure that is projected to triple by 2040.

People are the answer

Plastic is collected by hand in the countries most at risk for ocean plastic pollution. Solving the problem requires understanding the needs of community collectors and providing them with the tools for success.

The approach of Oceancycle™

There is no silver bullet to solve the ocean plastic problem. A systems approach is required and OceanCycle works on all aspects of that system.

1. Build demand for ocean-bound plastic

We make it easy for corporations to buy ocean-bound plastics at volume, which encourages recyclers to process more material from at-risk coastal communities

2. Boost community collection

We help educate coastal communities on best practices to manage waste and generate income from collected plastics.

3. Transport and process plastic

We ensure efficient logistics and segmentation of different types of plastics to drive high yields and quality.

4. Make new products

We drive innovation and help build efficient supply chains for packaging, fabrics, and injection-molded goods allowing companies to integrate purpose and profit into their core business models.

5. Sell and re-order

We help companies deliver genuine social and environmental impact in the communities where the material is collected.

Recycled Polyester ECO-DYED

Eco dyeing involves adding pigment direcly to the molten plastic solution before the fiper is made.

Conventional batch-dyeing processes (using synthetic dyes) require a tremendous amount of water and energy, resulting in waste and carbon emissions. We switched to Eco dyed, an approach that can result in up to 87% reduction in water use and 58% CO_2 savings overall compared to batch-dyeing, with considerably fewer chemicals released from the overall process.

-87% H_2O

in the production of ECO DYED polyester compared with virgin dyed polyester fabric.

-58% CO_2

in the production of ECO DYED polyester compared with virgin dyed polyester fabric.

ECO•DYED Roll
DM23110

Recycled polyester laptop backpack (15") with ecological dyeing. Padded inside for notebook, 2 front pockets with zip, 2 side pockets for bottles. The ecological dyeing involves the addition of pigments directly to the melted plastic solution before fibre production.
